[VOACAP \(Voice of America Coverage Analysis Program\)](#) is free professional high-frequency (HF) propagation prediction software from NTIA/ITS, originally developed for Voice of America (VOA).

This 'work-in-progress' guide should get you well started with the software. A more comprehensive discussion about the finer details of using the software can be found in George Lane's book [Signal-to-Noise Predictions Using VOACAP. A User's Guide](#). The book is now available on CD-ROM.

There is now also ["The Official VOACAP Blog"](#) - well, it's not too official.

NOTE: Running automated scripts to access VOACAP services is strictly prohibited unless agreed upon in advance with the VOACAP site owners.

17 The map and QSO list will automatically update.

An we are off!!
Come and get us

Due to network issues with one of the computers, not every QSO will be in the realtime update.

FINAL LOGS will be OK, so NO NEED TO WORRY or contact us for "personal" confirmations!

No sound?

Google Chrome has added restrictions in the autoplay policy for sound. The workaround for now is to change this policy in your browser. In the address-bar, type **chrome://flags/#autoplay-policy**. Set this flag to "no user-gestures is required". Please note that this affects all webpages!

Your contributions are welcome to help us fund the operation of the reciever!
